

Shahar Eliyahu

Software Engineer • B.Sc. Software Engineering

052-4845290 | Email: shahar25806@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

Software Engineering B.Sc. graduate with a major in **Artificial Intelligence**, with practical experience in **Machine Learning**, **Computer Vision**, and **NLP**. Experienced in dataset preparation, model training and evaluation, real-time data processing, and end-to-end AI development. Highly motivated to grow, learn, and contribute to challenging AI projects.

PROJECTS & AWARDS

EasyFill • Final Project | 2025-2026

- Built an Android application designed to assist people coping with post-traumatic stress during form-filling through **real-time distress detection** and adaptive support.
- Developed a **multi-signal distress detection** system combining facial signals, voice characteristics, hand tremor, and form-interaction behavior.
- Implemented **personalized baselines** and evaluated the detection algorithms using real-user tests and synthetic data.

Real-Time Retail Trend Detection • Big Data Project | 2026

- Built a real-time e-commerce streaming pipeline using **Apache Kafka** and **Spark Structured Streaming**.
- Implemented **stateful stream processing** and feature engineering, and used a **Random Forest** model to detect emerging product trends in real time.

Object Detection Pipeline • Computer Vision Project | 2025

- Built an end-to-end object detection pipeline on Flickr30k images, using **Florence-2** to auto-generate bounding-box annotations, followed by filtering, augmentation, training, and evaluation.
- Trained and evaluated **YOLO**-based detection models using **mAP50** and **mAP50-95**, focusing on person and vehicle detection.

Sentiment Analysis • NLP Final Project | 2025

- Built a sentiment analysis system on the IMDb dataset, including preprocessing, training, and evaluation.
- Implemented and compared **Word2Vec**-based representations, **LSTM** models, and **DistilBERT**.

TestGuru • College Hackathon **2nd Place** | 2024

- Built an exam-practice platform that maps syllabus topics to real past-exam questions and tracks performance by topic.
- Implemented performance analytics to identify weak areas and support targeted study planning.

EDUCATION

Afeka Academic College of Engineering • B.Sc. in Software Engineering | 2022-2026

AI Major: Machine Learning • Computer Vision • Natural Language Processing • Big Data Analytics • AI for Game Development • Autonomous Vehicles & Human Factors in AI

SKILLS

Programming: Python • Java • Kotlin • C • C++ • SQL

Machine Learning: PyTorch • scikit-learn • TensorFlow • Model Training • Model Evaluation

Computer Vision: Object Detection • YOLO • MediaPipe • Florence-2 • Dataset Generation • Annotation Pipelines

NLP: spaCy • Transformers • Sentiment Analysis • Text Processing • Named Entity Recognition

Data: Apache Kafka • Apache Spark • Spark Structured Streaming • Pandas • NumPy • Jupyter Notebook

Tools: Git • GitHub • Docker • Linux • Firebase • CUDA • Android Studio

EXPERIENCE

Landa Digital Printing • Systems Technician | 2021-2024

- Assembled, dismantled, and reassembled complex digital printing systems according to technical procedures and quality requirements, in a multidisciplinary environment.

Basketball Coach | 2019-2021

- Coached children's basketball groups, planned training sessions, and developed teamwork and discipline.

Military Service • Security Officer, Active Athlete | 2017-2019

- Responsible for facility security and security procedures, working under pressure with multiple teams.

LANGUAGES

Hebrew: Native | **English:** High Proficiency
